SHWETA BOCHARE

Senior Software Engineer | React.js • Node.js • MERN Stack

Pune, Maharashtra | shwetabochare11@gmail.com | +91-7350519505 | LinkedIn: shweta-bochare | GitHub: sb1197

PROFESSIONAL SUMMARY

Frontend-focused software engineer with 7+ years of professional experience building customer-facing web applications, reusable UI systems, and full-stack features. Strong hands-on experience with **React.js and Node.js**, including MERN-stack development, REST APIs, microservices, state management, component architecture, and production support. Experienced in taking features from design and technical decisions through implementation, deployment, and ongoing improvement. Also experienced with Python/Dash applications, AWS services, and modern AI-assisted development workflows.

CORE STRENGTHS

React.js & Frontend Architecture • Node.js & REST APIs • MERN Stack • TypeScript & JavaScript • Redux • Reusable Component Libraries • Design Systems • Storybook • Microservices • AWS • Testing • CI/CD • Production Support

PROFESSIONAL EXPERIENCE

Peak – A UiPath Company | Senior Software Engineer | June 2025 – Present

- Lead frontend architecture and framework modernization initiatives, owning technical decisions for scalable customer-facing web applications.
- Designed and delivered customer-facing applications and features including B2B Pricing (List Pricing & Quote Pricing), BidAI, and Recommender System solutions for Coles and Speedy, taking ownership from design through delivery.
- Own a reusable UI component library, driving component standardization, consistent user experiences, and maintainable frontend architecture across applications.
- Collaborate with stakeholders and designers to translate product requirements into practical, scalable UI solutions while promoting engineering best practices.
- Manage dependency upgrades and platform improvements to reduce technical debt, improve application stability, and support long-term maintainability.
- Current technology exposure includes **ReactJs**, Python, Plotly Dash, Flask APIs, Swagger UI, and OpenAPI, alongside strong frontend engineering foundations.

Peak AI | Software Engineer | April 2019 – June 2025

- Built and maintained end-to-end product features across frontend and backend, with React.js and Node.js at the core of application development.
- Developed scalable **React.js** applications using **JavaScript/TypeScript**, reusable components, state management, and modular frontend architecture.
- Designed and maintained backend integrations using **Node.js, REST APIs, PostgreSQL, and microservices**, connecting frontend experiences with production services.
- Architected a reusable component library with theming and Storybook documentation, improving UI consistency and accelerating development across teams.
- Implemented a platform-native SQL Explorer experience, enabling advanced data querying and exploration comparable to PostgreSQL administration tools.
- Built deployment specifications and configuration blocks and supported CI/CD automation, reducing manual operational effort.
- Used Swagger/OpenAPI-driven integrations to develop and maintain deployment-related APIs, improving automation and platform extensibility.
- Contributed across feature development, data migration/backfill operations, production support, and critical issue resolution.

BridgeLabz Solutions | Fellowship Engineer | June 2018 – March 2019

- Single-handedly developed fundooNotes, a Google Notes-style full-stack application using the MERN stack and AWS serverless services.

- Built responsive React.js UI features including card-based layouts, navigation, search, and list/grid views, with Node.js-powered backend functionality.
- Worked with AWS Lambda, DynamoDB, API Gateway, S3, SES, and ElastiCache and deployed the application using the Serverless Framework.

TECHNICAL SKILLS

Frontend: ReactJS, JavaScript, TypeScript, Redux, HTML5, CSS3, SASS, Webpack, Vite, Material UI

Backend: Node.js, REST APIs, Microservice Architecture

MERN: MongoDB exposure through MERN-stack development, Express/Node.js backend concepts, React.js, Node.js

Cloud & APIs: AWS Lambda, DynamoDB, API Gateway, S3, SES, ElastiCache, Swagger/OpenAPI

Engineering: Component Libraries, Design Systems, Storybook, Feature Flags (Split.io), CI/CD, Production Support

Testing & AI Tools: Jest, Cypress Testing Library, GitHub Copilot, Cursor, Claude

Additional: Python, Plotly Dash, Flask

EDUCATION

Bharati Vidyapeeth College of Engineering for Women, Pune | Bachelor of Engineering – Information Technology | July 2019 – June 2023

Scored: 75% | Pune, Maharashtra, India
